Education

Illinois Wesleyan University — Bloomington, IL

Bachelor of Science, Computer Science - 3.7 GPA — ***Expected Graduation: May 2028***

- **Relevant Coursework:** Data Structures & Algorithms, Software Development, Discrete Mathematics, Artificial Intelligence, Machine Learning
- **Leadership & Activities:** ACM (Vice-President), Teaching Assistant (Software Development & Intro to CS), Resident Hall Assistant

Experience

Software Engineer Intern — June 2026 – August 2026

Mastercard — *St. Louis, MO*

- Built a **Go/gRPC** xDS observability service saving **4,900+ engineering hrs/yr** of manual checks by tracking config propagation from control plane to data plane on ∼5,000 edge payment-entry nodes
- Built the Docker lifecycle manager for an MCP-first AI app, replacing manual MCP server setup and cutting maintenance time from 2-3 hrs/month to 15 min for **∼5,000 non-technical users**

Software Engineer — July 2025 – March 2026

Starbreak (Startup) — *New York City, NY*

- Built a RAG pipeline on Cloudflare R2 with SQL-based vector search, serving 5GB/user stores at **5–15ms** query latency so users get instant answers grounded in their own data
- Implemented isolated-environment deployments via **CI/CD** pipelines, saving **12-20 engineering hrs/month** in manual deployment work, enabling safer and faster releases
- Built a business analyst AI agent integrating REST APIs across Amazon Seller Central, QuickBooks, Meta Ads & Shopify, automating cross-platform business analysis

Software Engineer — July 2024 – March 2025

Keepsake (Legal Tech Startup) — *Remote*

- Cut intake time from **∼1-2 hrs to ∼20m** per attorney client by replacing paper/Google Docs forms with a React.js & MongoDB intake system, eliminating a major productivity drain
- Built an internal framework with React hooks, standardized APIs and automatic role-based access for standard intake form usage, replacing duplicated logic app-wide
- Cut server memory usage **∼34%** by implementing presigned URLs so files skip the backend, while migrating file storage from **AWS S3** to Google Cloud Storage

Projects

ResumeMaxxer — July 2026 – Present

- Built a Go/gRPC platform that finds new job postings and auto-tailors resumes, cutting internship discovery + tailoring from **24-48 hrs to 15 min** so my applications could land as early as possible
- Designed an event-driven pipeline with **retry & dead-letter queues**, so postings are processed idempotently and alerts reach users via Telegram without loss or duplicates

DigReddit — April 2025 – August 2025

- Built a real-time lead platform on Cloudflare Workers & AWS handling **∼1.7M posts & 8.6M comments/day** at ∼8s latency, significantly reducing users' client discovery by removing manual scrolling
- Improved lead-qualification accuracy with Aho-Corasick keyword filtering and Llama 3 analysis, qualifying posts in **∼3s** so users see only relevant, high-intent prospects

Technical Skills

Languages: Go, TypeScript/JavaScript, Python, C/C++, SQL, HTML/CSS
Frameworks/Tools: PostgreSQL, Docker, xDS, AWS, Google Cloud, Cloudflare, MongoDB, Git, GitHub Actions
Libraries: gRPC, React.js, Node.js, Flask
